EXPERIMENT - 8(a)

AIM:

To discover live host using NMAP scans (ARP, ICMP, TCP/UDP) on myhackme platform.

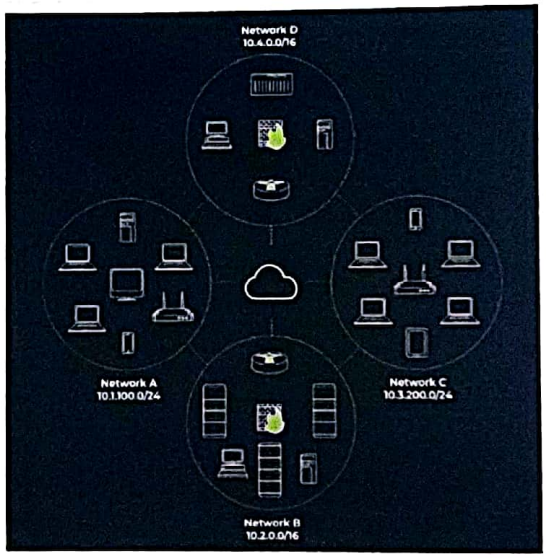

Introduction:

When targetting a network we need an efficient tool to handle repetitive tasks.

This room is list of tools in NMAP series

* NMAP live host discovery
* NMAP basic port scans
* NMAP Advanced port scans
* NMAP Post port scans

Subnetwork:

This figure displays two types of subnet

/16 subnets

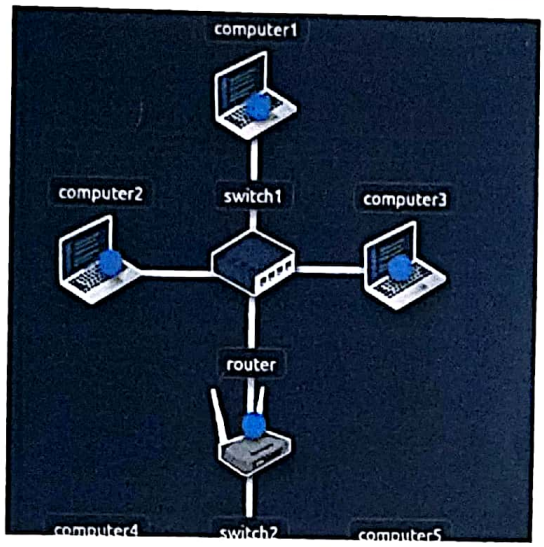

/24 subnets

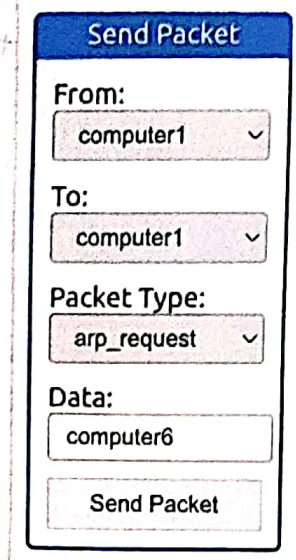

From computer 1

To computer 1

Packet type "ARP request"

Data computer 6

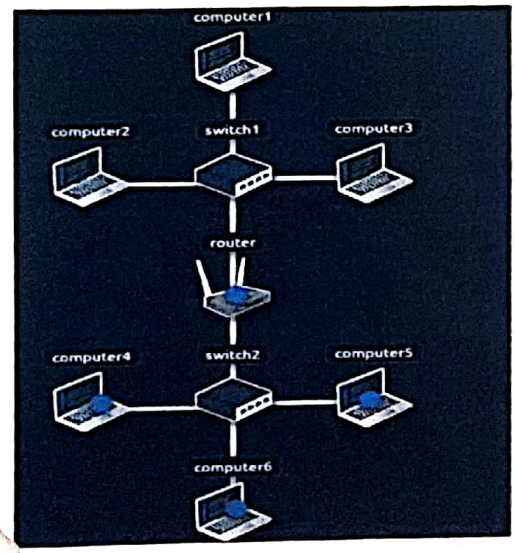

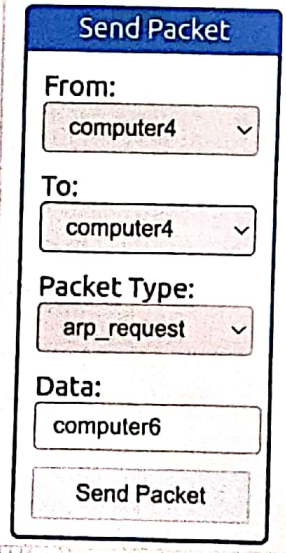

From computer 4

To computer 4

Packet Type : "ARP Request"

Data : computer 6

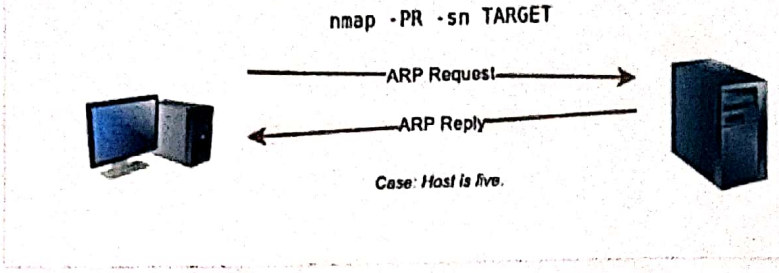

Scanned with OKEN Scanner

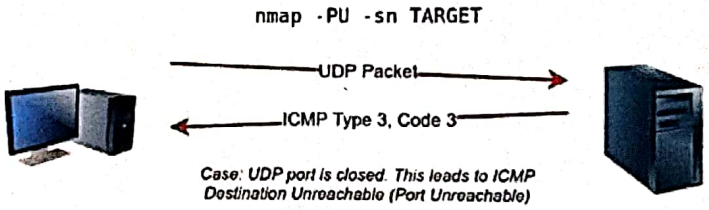

NMAP Host discovery using ARP:

When a Privileged user tries to scan targets on local network, NMAP uses ARP request

UDP PING:

While receiving UDP Packets to open UDP ports may not trigger a response, sending them to closed UDP ports

Result: Thus the requirement has been completed successfully using try Packet
